

Rainforest Minibeasts

Rainforests are also called jungles. The weather is very hot. It rains nearly every day so it is also very wet. Most of the world's insect species live in the rainforest. Rainforests are found in a belt around the Equator between the tropics of Cancer and Capricorn.

This is a Hercules beetle. It is the longest beetle in the world, measuring 190mm. It lives in South and Central America. It eats rotting fruit and searches for it on the

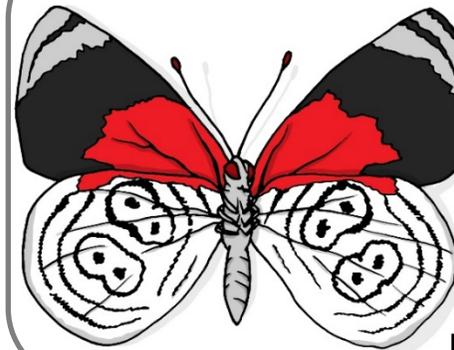

forest floor. It has long sword-shaped horns which curve together like pincers.

This is a morpho butterfly. It is one of the world's largest butterflies and has pretty metallic blue wings which catch the light when it flies. The underside of the wings are a dull brown. It lives in South America. The adult feeds on dead animals and rotting fruit.

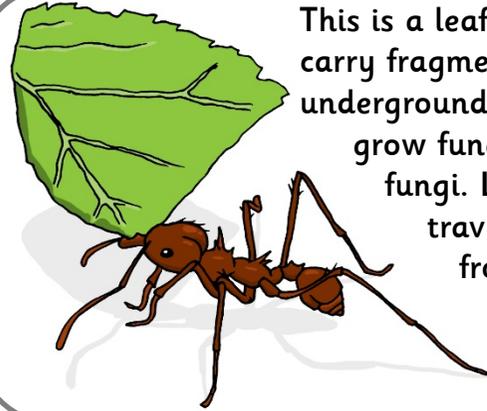

This is a tarantula spider, one of the world's largest spiders with a leg span of up to 25cm. Tarantulas live in the Amazon rainforest and are very hairy. Hairs on their legs help them to climb on smooth surfaces. The biggest tarantulas may eat lizards, mice and birds.

This is Anna's eighty-eight butterfly. It is called this because the pattern on its wings looks like the number 88. The pattern is in red, black and white on the underside of the wings while the top is brown with flashes of green. It lives near the River Amazon.

This is a trapdoor spider. It is a large, hairy, bird-eating spider which lives in the rainforest of Australia. It also eats insect prey. It hides in a burrow, setting a silk trap above it to catch any insects that land.

This is a leaf-cutter ant. These ants carry fragments of leaf to their underground nests, not to eat, but to grow fungi on. The ants eat the fungi. Leaf-cutter ants may travel up to 200m away from their nests to collect leaves.

Rainforest Minibeasts

Join up the name of each creature with the correct fact. The first one has been done for you. (AF2)

Hercules beetle

pattern on its wings is like a number

morpho butterfly

large ones can eat birds

tarantula spider

has shiny metallic wings

trapdoor spider

grows fungi to feed on

Anna's eighty-eight butterfly

has long sword-shaped horns

leaf-cutter ant

makes a silk trap for its prey

Why has the writer put the information in boxes? (AF4)

What does the adult morpho butterfly feed on? (AF2)

What do you think that the Hercules beetle may use its horns for? (AF3)

Why do you think that the underside of a morpho butterfly's wings are brown? (AF2/AF3)

How does a trapdoor spider catch its prey? (AF2)

Why has the author used illustrations of each creature? (AF4/AF5)

Rainforest Minibeasts

Join up the name of each creature with the correct fact. The first one has been done for you. (AF2)

Hercules beetle	pattern on its wings is like a number
morpho butterfly	large ones can eat birds
tarantula spider	has shiny metallic wings
trapdoor spider	grows fungi to feed on
Anna's eighty-eight butterfly	has long sword-shaped horns
leaf-cutter ant	makes a silk trap for its prey

Why has the writer put the information in boxes? (AF4) **To make the information clearer.**

What does the adult morpho butterfly feed on? (AF2) **Dead animals and rotting fruit.**

What do you think that the Hercules beetle may use its horns for? (AF3) **Fighting with rivals.**

Why do you think that the underside of a morpho butterfly's wings are brown? (AF2/AF3) **To provide camouflage.**

How does a trapdoor spider catch its prey? (AF2) **Spins a silk trap above its burrow.**

Why has the author used illustrations of each creature? (AF4/AF5) **To help reader to visualise what the creature looks like and make the text more interesting.**
